## Stellaris best defense platform 2. 0

The ODPS can also rotate to shoot the planets. [14] The orbital power defense platforms do not possess their power supply on board, since these generators consume too much space and provide a rapid neutralization by hostile naval forces. Receiving energy from soil-based electrical power plants, orbital platforms could get a top-up and charging the speed up to five seconds. An orbital defense platform also known as Mac platform. [4] was a type of great UNSC space station, used to defend strategic positions of great importance, typically highly strategic planets. Instead, the ground generators transmit power to stations. By 28 October 2558, several Moncton class ODPS were still in use on earth. Orbital defense platforms fire about 12,000 kilometers per second, 4% of the speed of light. The gallery sources as such was the case in the battle of reaching, a single Covenant Cruiser was able to implement sufficient land forces for overwhelming UNSC defense - he had the red spartan-IIS team not interfered. This allows larger and more efficient generators for platforms. The stations have often been positioned in geosynchronous orbit and deployed in groups or clusters, from two to five platforms. A portion and a small section of the 300 platforms saw the first action in the early stages of the battle of the earth. However, soil-based generators are also a great weakness, while the platforms are heavily armed and screens, generators can be easily overwhelmed and destroyed by the land forces of the pact. Defense platforms disabling was an important factor on the battle result.
